ATT&CK® EVALUATIONS · METHODOLOGY

HOW WE TEST.
HOW WE SCORE.
WHAT IT MEANS FOR YOU.

ATT&CK® Evaluations test security products against real adversary behaviors in controlled, transparent conditions — with no vendor-controlled demos, no cherry-picked results. This page explains our methodology and the new scoring framework for Enterprise 2026.

ALL READERS FOR CUSTOMERS FOR VENDORS

FOR SECURITY LEADERS & BUYERS

What evaluation results mean for your buying decisions

You're evaluating vendors or interpreting published results. Here's the context you need to make sense of TES scores and what they imply about operational fit for your organization.

📌 **Key insight:** Two vendors can have the same TES score but require fundamentally different things from your team. Always read the Source-of-Action modifier alongside the score.

THREE QUESTIONS TO ASK ABOUT ANY RESULT

1️⃣

What's the TES score?

Higher is better. The combined score reflects detection quality (DQI) and protection quality (PQI).

2️⃣

What's the modifier?

(P) means your team does the work. **(S/H)** means human analysts are included. **(S/AI)** means AI

3️⃣

What were the gaps?

Published results include per-technique scores. Look at DC-0 and PC-0 results — complete blind spots —

solution; the reverse is protection-first.

preference for outsourcing SOC functions.

gaps in ransomware-relevant techniques may not fit your risk profile.

WHAT THIS EVALUATION DOES NOT MEASURE

MITRE ATT&CK Evaluations are not a complete product review. The following are outside scope:

OUT OF SCOPE

- × Solution cost or pricing models
- × Ease of deployment or user interface design
- × Customer support quality or response times
- × Performance impact on endpoints or networks
- × Effectiveness in your specific environment

💡 Use evaluation results as one signal in a broader vendor evaluation — alongside proof-of-concept testing in your own environment, support quality assessments, and total cost analysis.
